

1. Website Name:

YouTube

2. Is it responsive?

Yes. YouTube is a responsive website because it automatically adjusts its layout to fit different screen sizes, such as mobile phones and desktop computers.

3. What changes on Mobile?

The navigation menu is simplified and appears as icons.

Videos are arranged in 2 columns.

The search bar is smaller to fit the screen.

Buttons are larger and easier to tap.

The layout is optimized for vertical scrolling.

4. What changes on Desktop?

The left sidebar is always visible with more menu options.

Videos have a larger display and more space between them.

The search bar is wider.

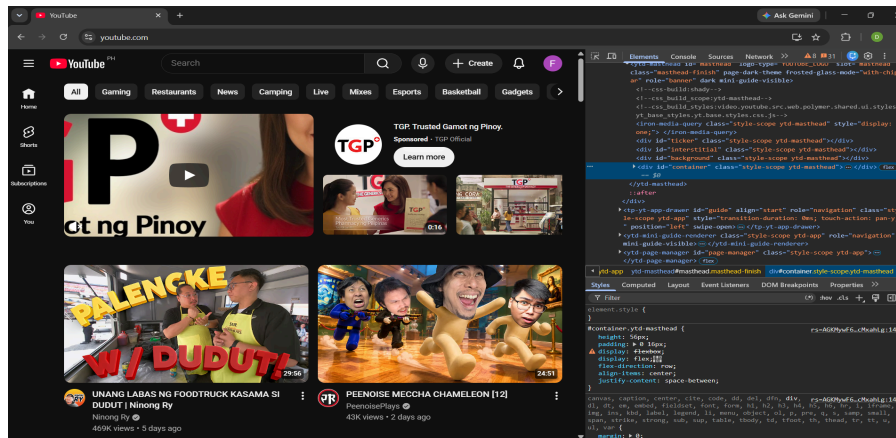

More content can be displayed on one screen because of the larger monitor.

The interface is designed for mouse and keyboard use.

5. What do you like about the design?

I like YouTube's design because it is clean, simple, and easy to use. The homepage is well organized, making it easy to find videos. It also adapts well to both mobile and desktop screens, providing a good user experience on any device.
